

SUMMARY

- Product Manager with 3.7+ years of experience, including 1.1+ years building fintech-functional systems, such as automated incentive payout/claims processing and financial statement data pipelines, within a regulated SaaS environment.
- Not just a PM who specs, but a PM who builds: designed and built **QueryBase**, an NL-to-SQL analytics and reporting platform, entirely from scratch (schema/semantic layer, query engine, validation), tested and deployed across multiple internal and client projects with 100+ database tables for financial analysis and reporting.
- Skilled at translating business and client requirements into structured, testable product features, with hands-on experience defining, building, and integrating APIs (Claude, Gemini) in live production systems.
- Executed core product management responsibilities including PRDs, backlog management, sprint coordination, and roadmap delivery using Jira and Confluence.

PROFESSIONAL EXPERIENCE

Associate Product Manager - Saksham Innovation Pvt Ltd (Medgini)

Sept 2024 - Present

- Gathered and structured product requirements from pharma brand managers, field force teams, and retail channel stakeholders, translating business needs into well-defined feature specs and PRDs with acceptance criteria.
- **Retail Incentive Claim Automation** (fintech-functional: claims & payout logic): Defined end-to-end requirements for a claims workflow where retail pharmacies upload purchase invoices to claim channel incentives. Specified document coverage, OCR extraction, validation rules, and payout triggers, reducing manual claim processing time by 85% and operational resources by 70%.
- **Enterprise Sales Statement Processing** (fintech-functional: financial data pipeline): Scoped and coordinated an AI-powered pipeline (Claude API) that ingests multi-format financial/distributor statements and extracts structured data, enabling channel performance analysis across 2,000+ retail outlets.
- **QueryBase, NL-to-SQL Analytics Platform** (built end-to-end): Designed and built, from scratch, a natural-language-to-SQL analytics and reporting platform, including the semantic context/schema layer and query generation engine (Gemini Flash + sqlglot). Tested and deployed across multiple internal and client projects with 100+ database tables for financial analysis and reporting, owning architecture through deployment with no engineering team.
- Partnered directly with engineering to define and review API contracts and output schemas for Claude/Gemini-based services, ensuring product requirements translated accurately into technical specifications.
- Coordinated UAT cycles across claim automation, statement processing, and analytics features. Tracked defects against acceptance criteria and ensured resolution before each release in collaboration with QA and engineering.
- Maintained clear product documentation throughout the lifecycle by drafting feature notes, requirement specs, edge case logs, and release summaries shared across product, engineering, and business stakeholders.

Tech Incubation Associate - FoundersLab

Jul 2023 - Aug 2024

- Worked closely with early-stage startup founders to shape product ideas into structured solutions, actively contributing to PRD creation and product roadmap definition.
- Conducted market research and competitive analysis to evaluate product opportunities, identify differentiation, and support product-market fit (PMF) assessment.
- Translated business concepts and founder inputs into clear product requirements, helping teams prioritize features and define early MVP scope with technical validation.

PROJECTS

QueryBase, NL-to-SQL Analytics & Reporting Platform (Medgini)

2025 - Present

- Built entirely from scratch as a solo builder-PM: architected the analytics and reporting platform powering natural-language querying for financial analysis and reporting.
- Designed the semantic context/schema layer that maps business language to database structure, and the query generation engine using Gemini Flash and sqlglot for safe, validated SQL translation.
- Tested and deployed across multiple internal and client projects spanning 100+ database tables, owning the full stack of decisions, from schema design and prompt/output specification to validation, without an engineering team, taking the platform to ~75% completion.

Retail Incentive and Rewards Claim Automation SaaS (Medgini)

Dec 2024 - Present

- Gathered and structured product requirements from business stakeholders, translating retailer incentive and cashback claim workflows into clearly defined features for engineering execution.
- Owned end-to-end product delivery from requirement definition to production rollout, working closely with engineering to clarify scope, resolve ambiguity, and ensure accurate implementation.
- Designed and shipped an AI-powered OCR pipeline that extracts and validates structured data from complex retailer-submitted invoices, enabling automated eligibility checks and incentive settlement (core claims/payout logic).
- Deployed the OCR API on AWS to ensure high availability within the live SaaS workflow, supporting concurrent processing across multiple pharma clients.
- Coordinated UAT cycles to validate feature readiness before each release, tracking issues and ensuring resolution before go-live.

Enterprise Sales Statement Processing & Analysis Workflow (Medgini)

Dec 2024 - Present

- Gathered requirements from business stakeholders to define processing needs for thousands of complex financial statements from pharmaceutical clients.
- Translated complex business requirements into structured feature definitions, working closely with engineering to ensure accurate implementation and edge case coverage.
- Integrated an AI-powered OCR pipeline with the existing system to automate extraction and processing of financial data from complex multi-format sales statements.
- Achieved 75% operational efficiency gains and a 40% reduction in resource cost with an automated financial data processing pipeline serving enterprise-scale clients.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (AI/ML)

July 2019 - March 2023

KL University, Hyderabad.

- Specialized in Artificial Intelligence and Machine Learning, with strong foundations in Python, cloud technologies like AWS and GCP, and building automation workflows.
- Completed three internships during the undergraduate program, gaining hands-on exposure to software development and real-world product environments.

PRODUCT MANAGEMENT CERTIFICATIONS & CONTRIBUTIONS

- **Product Management Program**, Jobaaj Learnings
- **Product Roadmapping Micro-Certification**, Product School
- **Product Strategy Micro-Certification**, Product School
- **Author of "Beyond Product"**, a monthly LinkedIn newsletter on product management, AI, and automation (480+ subscribers)
